

Business Trips and Delegation Visits

For more than ten years, we have been organizing more than 350 business trips for small and medium-sized enterprises. These trips are tailored to the client's objectives and may include communication and coordination with representatives of public authorities, private and public companies, trade associations and scientific institutions. The central element is the exchange between the visiting delegation and the host institution in order to establish and maintain business relations.

Delegation trips to Germany will include

- the inspection of production facilities or test laboratories,
- energy-generation plants,
- energy-efficient residential and office buildings,
- control rooms of network operators,
- waste management facilities/companies,
- sewage treatment plants and irrigation systems,
- transport facilities/companies,
- technology parks
- and more.

The primary objective of these visits is to present examples and flagship projects and to provide first-hand information from industry experts, who will present innovative concepts, products and processes.
