

Renewable heating solutions for Turkey

Training and lectures on renewable heating solutions in residential buildings

In close cooperation with guilds and universities of the provinces of Antalya, Izmir and Istanbul, a training concept for the monitoring and control of regenerative heating technology in residential buildings is being developed and implemented. For this, lecturers are trained in the context of training-of-trainers and pilot training for companies and lectures for students is carried out. eclareon advised the project consortium on the project application and is supporting the project management.
